

AI Response Validation System

Multi-Agent RAG-Based Hallucination Detection & Response Evaluation

1. Project Details

Project	AI Response Validation System
Full Title	Development of AI Response Validation System with Hallucination Detection Assistance (Group 1)
Author	Renuka Meesala
Evaluation Architecture	Multi-Agent Evaluation + RAG
Evaluation Dimensions	Accuracy, Relevance, Completeness, Hallucination
Evaluation Type	Single / Batch
Report Generated	13-08-2026 19:01:50

2. Batch Evaluation Summary

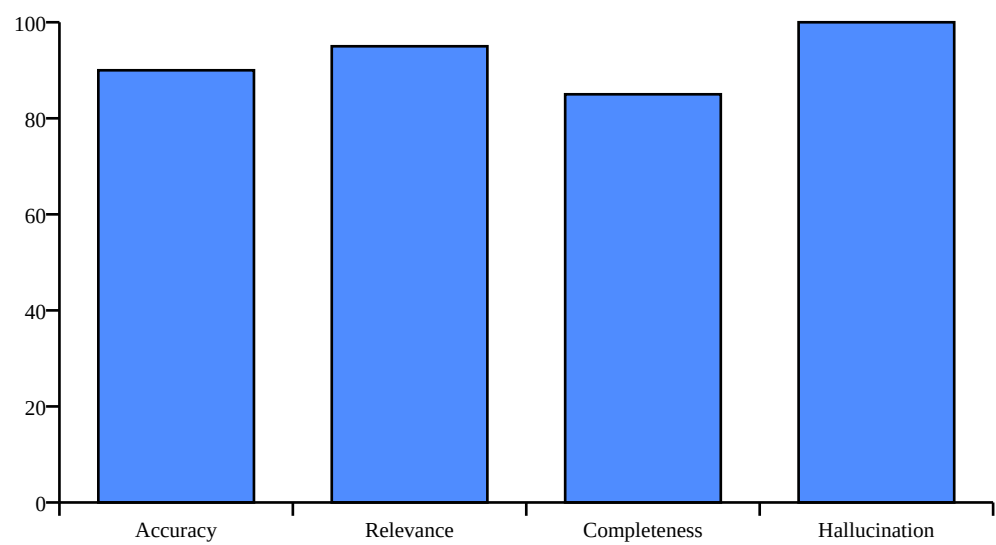

Metric	Result
Total Evaluations	1
Pass	0
Needs Improvement	0
Fail	0
Average Score	92.5/100

3. Evaluation Result Distribution

4. Dimension-wise Evaluation Scores

Dimension	Average Score
Accuracy	90.0/100
Relevance	95.0/100
Completeness	85.0/100
Hallucination Score	100.0/100

Dimension Score Comparison

5. Individual Evaluation Results

ID	Question	Accuracy	Relevance	Completeness	Hallucination	Final	Verdict
1	What is machine learning?	90.0	95.0	85.0	100.0	92.5	Excellent

6. Hallucinated Responses

No hallucinated responses were detected in the selected evaluations.

7. Improvement Recommendations

- Overall evaluation quality is satisfactory. Continue monitoring evaluation trends and periodically review flagged responses.

8. Overall Verdict

The evaluated responses achieved an average overall score of 92.5/100. Based on the configured evaluation thresholds, the overall batch verdict is **Good**.
