

Mentor Demonstration & Walkthrough Guide

Project Title: AI Response Validation System

Full Title: Development of AI Response Validation System with Hallucination Detection Assistance (Group 1)

Milestone: Milestone 4 — Deliverable 7

Author: Renuka Meesala

Date: August 13, 2026

■ Demonstration Objective

This guide outlines the step-by-step presentation script to demonstrate the platform to your mentor. You will showcase single evaluation, batch CSV upload, live analytics dashboard updates, PDF report export, and a live comparative evaluation between **two distinct AI systems**.

■ Step-by-Step Demonstration Script

Step 1: Project Introduction & Architecture (1 Minute)

* **Script:** "Good morning/afternoon mentor. Today I am presenting the AI Response Quality Evaluator. Our platform uses RAG vector retrieval and 4 specialized evaluation agents—Accuracy, Hallucination, Relevance, and Completeness—to evaluate AI model responses objectively."*

Step 2: Live Single Evaluation (2 Minutes)

1. Open the web interface at <http://localhost:5173>.

2. Enter a sample question:

* **Question:** "What causes malaria?"*

* **AI Response:** "Malaria is caused by Plasmodium parasites transmitted through female Anopheles mosquito bites."*

* **AI Model:** [GPT-4o](#)

3. Click "Evaluate AI Response".

4. Point out the agent score cards:

* ■ **Accuracy Agent** (95%)

* ■ **Relevance Agent** (95%)

* ■■ **Hallucination Agent** (0% Detected / 100% Score)

* ■ **Completeness Agent** (90%)

* ■ **Final Verdict:** [94.25%](#) - [Excellent](#)

Step 3: Batch Evaluation & System A vs System B Comparison (3 Minutes)

1. Click "■ Batch Evaluation".

2. Upload System A (High-Quality Model):

* Select file [[datasets/ai_system_a_gpt4o.csv](#)](file:///c:/Users/hi/OneDrive/Desktop/AI_Response_Quality_Evaluator/datasets/ai_system_a_gpt4o.csv).

* Click "Evaluate Batch".

* Show the summary: 5 records evaluated, Average Score ~95.1%, 0 Hallucinations.

3. Upload System B (Flawed/Hallucinated Model):

* Select file [datasets/ai_system_b_llama.csv](file:///c:/Users/hi/OneDrive/Desktop/AI_Response_Quality_Evaluator/datasets/ai_system_b_llama.csv).

* Click "Evaluate Batch".

* Show the summary: 5 records evaluated, Average Score ~28.4%, 5 Hallucinations detected!

Step 4: Analytics Dashboard & Filtering (2 Minutes)

1. Click "■ Evaluation Dashboard".

2. Point out:

* Total Evaluations counter updated.

* Grade Distribution pie chart (showing **Excellent** vs **Fail**).

* Quality trend line chart over time.

3. Filter by Model:

* Select **GPT-4o (System A)** in the Model filter dropdown $\rightarrow$ Shows 100% Pass rate.

* Select **Llama-3-Base (System B)** in the Model filter dropdown $\rightarrow$ Shows 100% Fail / Hallucinated rate.

Step 5: Export & Download PDF Executive Report (1 Minute)

1. Click "■ Export PDF Report" button at the top right of the dashboard.

2. Open the downloaded PDF report and show your mentor:

* Executive header and summary metrics.

* Dimension-wise score breakdown.

* Flagged hallucination list highlighting System B's incorrect claims.

* Actionable improvement recommendations.

■ Key Summary Talking Points for Mentor

* **RAG Grounding:** Prevents generic evaluations by using ChromaDB document retrieval to check true facts.

* **Repeatable & Consistent:** Test suites prove $\sigma = 0.00$ variance across runs.

* **Enterprise-Ready:** Generates downloadable PDF reports for stakeholders.
