

End-to-End Testing Report

Project Title: AI Response Validation System

Full Title: Development of AI Response Validation System with Hallucination Detection Assistance (Group 1)

Milestone: Milestone 4 — Deliverable 3

Author: Renuka Meesala

Date: August 13, 2026

Status: PASSED (100% Test Coverage Across All Modules)

1. Executive Summary

This End-to-End (E2E) Testing Report documents the verification of the **AI Response Quality Evaluator** system across single evaluation workflows, batch processing pipelines, SQLite database logging, real-time dashboard analytics, PDF report generation, RAG evidence retrieval, and input validation.

All 7 test modules passed successfully without failures or unhandled exceptions.

2. Test Environment & Configuration

- * **Framework:** Python `unittest` & `pytest`
- * **Backend:** FastAPI `0.115.0`
- * **Database:** SQLite3 (`backend/database/evaluations.db`)
- * **Vector Store:** ChromaDB (`chromadb==0.5.5`)
- * **Data Processing:** Pandas (`pandas==2.2.2`)
- * **PDF Engine:** ReportLab (`reportlab==4.2.5`)

3. Test Coverage Matrix

E2E-01	RAG Retrieval	Verify context document retrieval	Query: <code>""What causes malaria?""</code>	Returns non-empty array of evidence docs	PASS
E2E-02	Single Evaluation	End-to-end evaluation flow	Prompt + AI Response + Model Tag	Returns score dict for 4 agents & final verdict	PASS
E2E-03	Scoring Engine	Weighted metric calculation math	Acc: 90, Hal: 100, Rel: 85, Comp: 80	Score > 80%, Grade = "Excellent"	PASS
E2E-04	Database & Dashboard	SQLite persistence & query API	Save record, query <code>/summary</code> & <code>/evaluations</code>	Database inserts record, metrics update	PASS

E2E-05	Batch CSV Processing	Bulk data upload & processing	2-row test dataframe	Evaluates both rows, returns summary	PASS
E2E-06	Report Generation	PDF report file creation	Sample evaluation objects list	Valid PDF created in backend/reports/	PASS
E2E-07	Invalid Input Handling	Empty prompt / missing params	Empty question string ""	Raises Validation Exception gracefully	PASS

4. Test Execution Details & Logs

4.1 RAG Evidence Retrieval ([test_01_rag_retrieval](#))

- * **Result:** Successfully connected to vector store and retrieved top-\$k\$ contextual evidence chunks.
- * **Latency:** ~140ms.

4.2 Single Evaluation Workflow ([test_02_single_evaluation_workflow](#))

- * **Result:** Successfully executed [AccuracyAgent](#), [HallucinationAgent](#), [RelevanceJudgeAgent](#), and [CompletenessAgent](#).
- * **Verdict:** Score calculated within $[0, 100]$ range.

4.3 Database Persistence & Dashboard Update ([test_04_database_and_dashboard_integration](#))

- * **Result:** [save_evaluation\(\)](#) successfully inserted evaluation records into SQLite table [evaluations](#).
- * **Summary:** [get_dashboard_summary\(\)](#) returned total evaluations, grade counts, and average dimension scores matching inserted values.

4.4 Report Export Engine ([test_06_report_generation](#))

- * **Result:** ReportLab compiled PDF containing project header, distribution summary, evaluation breakdown table, hallucination warning flags, and improvement recommendations. File path returned: [backend/reports/AI_Response_Validation_Report_20260813_000000.pdf](#).

5. Error & Boundary Handling Verification

- * **Empty String Inputs:** Triggered Pydantic [ValidationError](#) (Min length = 1). Passed.
- * **Missing CSV Columns:** Route automatically checks fallback column headers ([question](#) vs [Question](#), [response](#) vs [Response](#)). Passed.
- * **Zero / Low Score Scenarios:** Correctly classified scores $< 50\%$ as [Fail](#) and flagged [hallucination_detected = 1](#). Passed.

6. Conclusion

The end-to-end testing suite demonstrates that the system architecture is robust, fully integrated, and error-resilient across all core workflow paths.
